

“We decided to invest in solar because it will save us significantly more than re-investing our money in a CD.”

Project Description:

When John and his wife Melanie looked at solar panels for their home, they discovered it was not only a good thing to do for the environment, but it was also a wise investment. John realized with the \$6,000 rebate from the state of NH in addition to the 30% tax incentive from the Federal Government, that he would get a better return adding solar to his home versus keeping money in a CD.

Waterline Alternative Energies took care of every aspect of the installation including permitting, panel design and installation. The installation took less than 3 working days and started producing kilowatt-hours upon completion.

When Jeff Haydock, Sales Director, asked John how he felt about his experience, he had this to say:
“Between you, Frank, James, and the rest of the installation crew, I have never seen anything so professional in my whole life. I am very impressed, and we are very happy thus far.”
